Fatma Cülha 2 Apr

To Me

Dear Mr. Ahmed,

This is Fatma from International Department at Anadolu Medical Center. We have received your inquire and we are going to help you as much as we can. Please note that the medical infrontaion of the patient was evaluated by Prof.Dr. Sertaç Çiçek(Director of Cardiac Care Department). Please find his opinion as below;

◀ "Dear Sir,
This is a 25-year old male who underwent coarctation balloon in 1993 and subaortic membrane resection in 1995. He recently has developed high fever and echo showed severe mitral stenosis with endocarditis. He is recommended a mitral valve replacement and tricuspid repair and blood culture is negative now. Given his young age the only viable option is mitral valve replacement with a mechanical valve and tricuspid repair. The success rate is close to 100% and average stay is generally 7-10 days depending anticoagulation status. Total cost including the mechanical valve and all upto 3 weeks of stay if needed will be 19000 USD

Kind Regards,
Prof.Dr. Sertaç Çiçek"

Following the opinion presented above, please note that we are willing to help our patient at our best with the high technology standards of ours, combined with the expertize of our physicians and the necessary multidisciplinary approach atmosphere with the participation of Cardiac Care Team and all other medical departments related to the patient's clinical state.

Upon this e-mail, briefly, please note that we would be happy to receive the patient here in AMC to have the related scannings and consultations in order to define the most appropriate treatment plan and to proceed with it a.s.a.p.

I looking forward to helning you at our best please accept our best regards.
